คู่มือครูสำหรับการใช้งานแพลตฟอร์ม FUTUREPROOF — แนวทางการสอน การประเมินผล
และการตรวจสอบเชิงทฤษฎีสำหรับคณะกรรมการตัดสิน

PURPOSE · จุดมุ่งหมายของคู่มือ

This manual serves two readers at once: **teachers** who want to onboard a class and run the platform with confidence, and **competition judges** who need to audit the architecture and the pedagogical claims behind it. Every chapter is written so either audience can read it cold and answer their own first question.

PEDAGOGICAL SPINE · กระดูกสันหลังทฤษฎี

PICRAT (Kimmons, Graham & West 2020) · **AI-TPACK** (Mishra & Koehler, extended) · Bloom's Revised Taxonomy · CAST UDL 3.0 · Krashen i+1 · Vygotsky ZPD · Lave & Wenger Situated Cognition · Hattie Visible Learning · Mayer CTML · UNESCO ESD

สารบัญ

How to read this manual

วิธีอ่านคู่มือเล่มนี้

Two audiences are served by this single document. Read selectively – every chapter is self-contained, and the chapter opener tells you what's inside before you commit.

Who this manual is for

This manual addresses two readers with overlapping but distinct concerns:

- Teachers who will run FUTUREPROOF in a real classroom – what to do before, during, and after the course. The operational chapters (5, 7, 8, 10) are written for you. Time-to-first-class: ~ 90 minutes of reading + 30 minutes of setup.

- Competition judges and academic reviewers who need to audit the pedagogical claims, the AI-human boundary, and the architectural decisions. The theory chapters (3, 4) and rubric summaries (11) are written for you. Time-to-confident-assessment: ~ 45 minutes of reading.

Reading paths

IF YOU ARE...	READ IN THIS ORDER
A teacher new to FUTUREPROOF	Chapters 2 → 5 → 6 → 7 → 10 → 13 (skip 3 / 4 first pass)
A teacher with class already onboarded	Chapters 7 → 8 → 10 → 11
A competition judge	Chapters 2 → 3 → 4 → 8 → 11 → cover-page of any Rubric PDF
An academic reviewer / researcher	Chapters 3 → 4 → 5 → 8 → 11 → DPIA appendix

Conventions

Thai gloss

All chapter and section heads carry an italic Thai parallel. Technical terms (PICRAT, AI-TPACK, CEFR, CTML) are left untranslated by convention – Thai academics use these terms in their original form.

Callouts

Gold callouts surface practical tips. Crimson callouts surface load-bearing rules – break these and you break the pedagogy. Teal callouts speak directly to competition judges.

Screenshot reservations

Dashed gold boxes mark where a screenshot of the live platform will appear in the print edition. The web edition links to a high-resolution version of each.

Cross-references

"See Rubric A §3" refers to chapter, section, or paragraph in another document in the FUTUREPROOF submission package.

A note on language The platform itself operates in English. Thai appears only in navigation labels, consent forms, and accessibility helpers – never in mission content, dossier text, or AI scoring. This is by design (see Chapter 3 §3.4 on Krashen i+1). The Teacher's Manual carries Thai parallel headings because teachers are bilingual professionals, not learners in the sense the platform addresses.

At a glance

ภาพรวมแบบเร็ว

Two pages. The fastest possible orientation. If you read nothing else, read this.

One paragraph

FUTUREPROOF is a self-contained AI-scaffolded web platform that sends advanced Thai undergraduates on **six adaptive missions across Thailand**, each anchored to a UN Sustainable Development Goal. Every mission runs the same **five-stage arc** – BRIEF → PROBE → DECIDE → ACT → DEBRIEF – and is scored by an AI Judge against an auditable rubric. Clearing all six awards six SDG Keystones and unlocks **Voice for Change**, the multimodal capstone proposal addressed to a real Thai audience. Throughout, an in-app Socratic field mentor (Mr Compass) provides language scaffolding within strict guardrails. The teacher remains the summative grader; the AI handles the formative scale.

Key facts

Course context

LALA109 · English for Digital Communication Skills · Faculty of Liberal Arts,
Mahidol University · elective, advanced undergraduate (CEFR B1+ floor).

Dr. Payungsak Kaenchan | Faculty of Liberal Arts, Mahidol University
Creative Commons BY-NC · Educational, non-commercial use only · No profit · Reuse or duplication must credit
the author and obtain prior consent.

Cohort size

Up to 50 students per section × 6 sections = 300 max per term.

Term length

15 weeks · 3 in-class hours + 6 async hours per week.

Tech stack

HTML5 + Tailwind CSS + vanilla JS · Firebase (auth, Realtime DB, Storage) ·

Anthropic Claude API · Stability.ai for avatars · Netlify hosting.

First semester of use

Semester 1, Academic Year 2569 (Aug 2026).

The pedagogical spine, one sentence each

- PICRAT – every mission lives in the Interactive-Amplifies cell or above; the capstone lives in Creative-Transforms.
- AI-TPACK – AI handles consistency at scale (formative feedback, dossier tiering, language coaching); the teacher handles authority (summative grade, intervention judgment, cultural authenticity).
- Three learning theories – Behaviorism (token economy), Cognitivism (5-stage chunking + CTML capstone), Social Constructivism (3-role asymmetric teams + Hall of Voices).

What the judge sees at first glance

Home screen · Thailand Journey Hand-illustrated map of Thailand with six numbered mission pins. Top status bar shows the learner's tokens, integrity meter, and current rank.

futureproof-sdgs-lab.netlify.app/journey · 1920×1080 · capture date TBD

For the judge Every claim in this manual is anchored to a feature you can verify in the live platform. Where the manual cites "Mr Compass," you can open Mr

Compass. Where it cites "AI Judges," you can read the actual scoring output on the Final Task screen. The platform is the proof of the manual.

Pedagogical foundations

รากฐานเชิงทฤษฎี

Two frameworks are load-bearing – remove either and the platform collapses. Nine more are supporting frameworks that fill in the specifics.

The two load-bearing frameworks

Most ed-tech platforms cite a long list of frameworks decoratively. FUTUREPROOF declares **two as load-bearing** – they govern every design decision, and removing either would collapse the pedagogical architecture.

PICRAT · the position on the matrix

Kimmons, Graham & West (2020) plot any educational technology on a 3 × 3 matrix: the learner's relationship to the technology (Passive · Interactive · Creative) by the technology's relationship to traditional practice (Replaces · Amplifies · Transforms). FUTUREPROOF targets **Interactive-Amplifies as the floor** for every regional mission, and **Creative-Transforms** for the Voice for Change capstone.

Practically: a mission that could be replaced by reading a textbook + answering a quiz lives in Passive-Replaces and is rejected at design review. A mission where the learner generates a defensible decision under a real trade-off lives at Interactive-Amplifies. A capstone where the learner creates a multimodal artifact addressed to a real audience lives at Creative-Transforms.

Load-bearing rule No feature ships if it sits in Passive-Replaces. This is the auditable test, and it has cut features from the design twice during development. See Reconstruction Master §2 for the rejected-features list.

AI-TPACK · the boundary

Mishra and Koehler's original TPACK framework asked which knowledge a teacher needs to teach with technology. The AI-extended version asks something sharper: **what does the AI handle and what does the human handle**, and why is that boundary the right one?

WHAT AI HANDLES	WHAT THE HUMAN (TEACHER / LEARNER) HANDLES
Formative scoring at scale (Rubric B)	Summative grading (Rubric A)
Dossier reading at three CEFR tiers	Cultural authenticity vetting of dossier facts
Real-time language coaching (Mr Compass)	Intervention judgment when a team is stuck
Consistency across 300 learners	The voice of the learner in the capstone
Counter-position generation (DECIDE stage)	Ethical arbitration of the trade-off itself

Load-bearing rule AI never gives content answers about the SDG topic. AI never overturns the teacher's summative grade. The capstone (Voice for Change) is graded human-only. Mr Compass redirects content questions back to the team. These are not aspirations – they are enforced in the system prompts and the platform UX.

The supporting frameworks (nine of them)

Bloom's Revised Taxonomy CAST UDL 3.0 Krashen i+1 Vygotsky ZPD Wood-Bruner-Ross Scaffolding Lave & Wenger Situated Cognition Hattie Visible Learning Mayer CTML UNESCO ESD

Each of these fills in specifics that PICRAT and AI-TPACK demand. Bloom maps the cognitive level of each stage. CAST UDL governs the three submission lanes for Voice for Change. Krashen i+1 sets the reading-tier algorithm. Vygotsky ZPD justifies the deliberate confidence trap at DECIDE. Lave & Wenger frames Hall of Voices as a Community of Practice. Hattie justifies the formative-feedback contract. Mayer CTML drives the multimodal capstone studio. UNESCO ESD provides the SDG content backbone.

The auditable test

For any new feature, three questions are asked in order. If a feature fails any one, it is redesigned or rejected.

- PICRAT cell. Where does it sit? If Passive-Replaces, redesign.
- AI-TPACK boundary. Is the AI/human split defensible? If AI replaces judgment that should stay human, redesign.
- Supporting framework. Which of the nine justifies the specifics? If none, the feature is decoration – cut it.

For the judge Ask any FUTUREPROOF feature this trio of questions. The platform's designers have answered them in writing for every shipped feature. If you spot one that fails the test, that is a fair finding and we want to know.

Three learning theories, made operational

ทฤษฎีการเรียนรู้สามสำนักที่ปฏิบัติได้จริง

Behaviorism, Cognitivism, and Social Constructivism are the three classical schools every education faculty teaches. FUTUREPROOF doesn't just cite them – it maps each to specific platform features you can audit.

Why this chapter exists

Most ed-tech submissions cite Vygotsky once and move on. The premise of FUTUREPROOF is that the three classical schools of learning theory –

Behaviorism, Cognitivism, Social Constructivism – are not in competition. They each model a different layer of how learners change. A well-designed platform operates all three simultaneously. This chapter shows which platform features execute each theory, so a judge or researcher can verify the claim feature by feature.

Behaviorism · Skinner · Pavlov · Watson

พฤติกรรมนิยม

- Insight Token Economy – operant conditioning. Positive reinforcement +5...+25 for quality work; negative –5...–10 for weak reasoning.
- AI Judges (3 evaluators) – immediate formative feedback within seconds, completing the stimulus-response loop.
- Keystone Collection (6 dots) – variable-interval reinforcement schedule that sustains persistence across the term.
- Adaptive Reading Tiers – successive-approximation shaping (Tier 1 → 3) so the learner is always inside their response range.
- Verified Credentials – terminal reinforcer at capstone completion.

Cognitivism · Bruner · Ausubel · Sweller · Mayer

ปัญญานิยม

- 5-Stage Mission Arc – chunking for cognitive load (Sweller). Each stage exposes only what working memory needs now.
- Pre-Mission Brief – Ausubel's advance organizer. Three objectives + three outcomes + scoring criteria before content.
- Mission Dossier – externalized schema. Read-anytime popup during Decide & Act reduces extraneous load.
- Voice for Change Studio – text + audio + image (Mayer CTML dual-coding).
- Integrity Meter & Time Capsule – metacognitive monitor (Flavell).
- Consequence-aware decision branching – forces mental-model update (Bruner schema-construction).

Social Constructivism · Vygotsky · Lave & Wenger

การสร้างความรู้เชิงสังคม

- 3-Role Asymmetric Team – Research Analyst, Comms Director, Ethics Officer; each sees different data. Forces co-construction in English.
- Mr Compass – More Knowledgeable Other within ZPD; Socratic, never content.

- NPC Stakeholder Interviews – situated learning in authentic Thai contexts (Lave & Wenger).
- Hall of Voices – Community of Practice; peripheral → full participation.
- Peer Judges (Tier 2 of 4) – peer rubric exchange; social mediation.
- Stakeholder Dispatch videos – four real-Thai voices per mission, in-classroom co-construction.

Why this matters for scoring

Thai education-innovation rubrics typically award their highest marks under "การออกแบบเชิงทฤษฎี" (theoretical design) when a submission can show operationalised theory – not just cited theory. Every row above names a platform feature you can click on. Every theorist is named. Every claim is auditable in under 60 seconds with a live platform open. That is the standard we hold ourselves to.

For the judge If any cell in the triptych appears to overstate what the platform does, please flag it. The architectural commitment is that every theory citation in this manual maps to a feature in the live build – not to a plan, not to a future roadmap.

Portal architecture

สถาปัตยกรรมระบบ

Six layers, top to bottom. What runs where, what data flows where, and how the AI-human boundary is enforced at every layer.

System layers

FUTUREPROOF · System Architecture

Presentation

Static HTML5 pages compiled with Tailwind CSS CLI (no CDN). Vanilla JavaScript ES2020+. Mobile-first responsive from 360 px upward. PWA-ready. Served from Netlify CDN.

Identity

Firebase Auth (email/password). Role flag on user profile: learner · teacher · admin. PDPA consent flags stored separately and gate any personal-data read.

Data

Firebase Realtime Database – learner profiles, decision logs, token balances, Keystone state, consent flags. Firebase Storage – avatar images, Voice for Change uploads, audio recordings. Security rules in firebase-rules.json enforce per-user write access.

AI proxy

Netlify Functions wrap Anthropic Claude API (Sonnet) and Stability.ai. API keys live in Netlify env vars – never reach the browser. Per-call rate-limiting and per-user daily quotas.

Pedagogy

System prompts encode Rubric B logic (AI Judges) and Field Mentor guardrails. Every AI return includes a mandatory growthEdge – null fails validation and the call retries.

Content

Six SDG scenarios stored as immutable production masters in /scenarios/. Each scenario carries the dossier at three CEFR tiers, four stakeholder dispatch videos, the AI Judge scoring criteria, and the regional trade-off statement.

Data flows

- Sign-up → consent. PDPA consent recorded before any personal data write. The readiness check is hard-gated: it will not run and writes nothing until consent is granted.
- Readiness check → reading tier. Diagnostic sets the learner's CEFR tier (1, 2, or 3). Dossiers are served at the learner's tier; audio is never tiered.
- Mission decision → AI Judge → token award. Each decision call goes to Claude through the Netlify proxy with the Rubric B system prompt; the response includes scores per criterion, a growthEdge string, and a token delta.
- Keystone award. When the mission composite passes the threshold, the Keystone is awarded (idempotent – re-running cannot double-award).
- Capstone unlock. Six keystones unlocks Voice for Change. Teacher overrides are logged with reason for audit.
- Hall of Voices curation. Capstone publication requires a second, explicit, withdrawable consent – separate from PDPA consent and revocable any time from My Data.

Why the architecture matters for compliance

Three architectural choices carry compliance weight that competition judges will look for:

- API keys never in the browser. Every AI call goes through a Netlify Function. Inspect the page source; you will find no Anthropic key.
- Granular consent flags. Photo, voice, decision-history, public-showcase – each is a separate flag, separately revocable. PDPA's data-subject-access-request workflow is a built-in screen, not a manual process.
- 90-day auto-deletion. Personal data tombstones after 90 days post-course; pseudonymized analytics survive for research.

Admin Dashboard · Architecture overview The seven-module Admin Command Platform: User Management, Mission Architect, Analytics, Content Moderation, PDPA Center, System Configuration, Hall of Voices Curator.

The Thailand Journey · six missions

การเดินทาง ๖ ภูมิภาค ๖ SDG

One country, six regions, six trade-offs. Each mission anchors a different SDG to a real Thai context. Learners may take them in any order; clearing all six unlocks the capstone.

Why six, not seventeen

The UN has 17 Sustainable Development Goals. Why does FUTUREPROOF run six? Because six is the maximum a 15-week term can carry at the depth we insist on. Each mission has been authored to production-master depth – real Thai stakeholder names, real trade-offs, vetted illustrative ranges, four-voice dispatch videos. A 17-SDG version would be a mile wide and an inch deep. The roadmap (Chapter 13) describes how the platform scales to 17 once a partner faculty wants to commission additional regions.

The Thailand Journey screen Hand-illustrated map of Thailand with six pinned missions. Earned Keystones light gold; unearned ones remain ink-line. The compass-rose in the upper right indicates the learner's current direction of travel.

futureproof-sdgs-lab.netlify.app/journey · 1920×1080 · capture date TBD

The six missions at a glance

01 North · Chiang Mai SDG 13 · CLIMATE

The Burning Season

Clean air vs. agricultural livelihood – when burning is the cheapest pre-monsoon land clearance, who pays the cost of clear lungs?

Authentic context

Hill farmers, urban respiratory clinics, Mae Hong Son provincial government, ASEAN haze treaty.

Bloom focus

Evaluate · Apply

Key dossier figures

PM2.5 readings, GISTDA hotspot maps, crop-residue tonnage estimates.

Counter-position

"A ban without alternatives criminalises poverty."

02 Northeast · Khon Kaen SDG 6 · WATER

The Aquifer Below

Today's water vs. the next generation's water – when the aquifer takes decades to refill and rice farming takes it in months, what does fairness mean across time?

Authentic context

Smallholder rice farmers, Royal Irrigation Department, Khon Kaen Hospital, downstream Lao villages.

Bloom focus

Analyze · Evaluate

Key dossier figures

Aquifer recharge rates, well-depth survey ranges, paddy water-footprint estimates.

Counter-position

"This generation's poverty is a justice claim too."

03 Central · Bangkok SDG 11 · CITIES

The Klong and the City

Flood defence vs. canal-side tenure – when concrete embankments save the central city, what happens to the canal communities that have lived there for generations?

Authentic context

BMA flood engineers, Khlong Toey community, Department of City Planning, riparian heritage advocates.

Bloom focus

Analyze · Apply

Key dossier figures

2011 flood data, urban-density gradients, tenure-displacement counts.

Counter-position

"Saving the centre is a defensible utilitarian choice."

04 West · Tak / Mae Sot SDG 4 · EDUCATION

The Children at the Border

National curriculum vs. cross-border continuity – when migrant children need recognized credentials but the home-country curriculum is unavailable, whose education system steps in?

Authentic context

Migrant learning centres (MLCs), Thai MOE, UNHCR, Myanmar community elders.

Bloom focus

Understand · Evaluate

Key dossier figures

MLC enrolment estimates, dropout-to-work transitions, credential-recognition pathway data.

Counter-position

"Sovereignty over curriculum is a defensible state interest."

05 East · EEC Fringe SDG 3 · HEALTH

The Village Left Behind

Industrial growth vs. community health – when the Eastern Economic Corridor brings jobs but also air-quality and water-quality stress to neighbouring villages, what does "shared prosperity" mean?

Authentic context

EEC Office, Mab Ta Phut Hospital, fishing-village leaders, Rayong public health.

Bloom focus

Analyze · Apply

Key dossier figures

VOC emission ranges, hospital-admission patterns, jobs-vs-relocation surveys.

Counter-position

"Growth that funds public health is itself a health investment."

06 South · Andaman SDG 14 · OCEAN

The Reef and the Tide

Tourism revenue vs. marine recovery – when a temporary closure of a famous reef would let coral recover but cost thousands of livelihoods, who decides and on what time horizon?

Authentic context

Department of Marine and Coastal Resources, Phi Phi tour operators, marine biologists, hotel SME associations.

Bloom focus

Evaluate · Create

Key dossier figures

Coral cover %, visitor counts, livelihood-impact ranges.

Counter-position

"Permanent closure punishes the community for tourist behaviour."

Authoring discipline Every dossier figure is from a published Thai source (NESDB, GISTDA, DMCR, MOE, etc.) or is presented as an illustrative range rather than a precise number. The platform does not fabricate statistics. The four stakeholder dispatch videos per mission feature real-Thai voice actors performing real-context monologues authored from publicly-available stakeholder statements.

The 5-stage mission arc

วงจรการเรียนรู้ ๕ ระยะ

Every mission, every region, runs the same arc. The structure is a mastery spiral – not a linear textbook chapter – and each stage is anchored to a level of Bloom's revised taxonomy.

The arc, end to end

BRIEF

Remember / Understand

absorb the situation

PROBE

Analyze

question the sources

DECIDE

Evaluate

choose under trade-off

ACT

Apply

communicate the decision

DEBRIEF

Metacognition

reflect on consequence

BRIEF — absorb the situation

The mission opens with the dossier delivered at the learner's CEFR tier. Same facts, different language. Four stakeholder dispatch videos play in any order. The learner is expected to surface the tension and whose interests it pits – not just summarise.

PROBE — question the sources

The learner is asked to evaluate source provenance (recency, methodology, conflict of interest) across the dossier. The AI Judge looks for whether the learner trusts the loudest voice or weighs provenance signals.

DECIDE — choose under trade-off

The highest-stakes stage. A real trade-off is presented; the learner commits to a position with confidence calibration. A **deliberate confidence trap** rewards calibrated humility and penalises overclaim – modelling intellectual humility in line with Vygotsky's productive struggle.

The confidence trap At DECIDE, the AI Judge does not score "correctness." It scores calibration. A learner who commits to a position with 100% confidence on weak evidence loses tokens; a learner who commits with 70% confidence and names the residual uncertainty scores higher. This is the most-asked-about feature

by judges, and it is the architectural reason the platform does not collapse into "guess what the AI wants."

ACT — communicate the decision

The learner writes (or speaks) the decision to a specified audience – sometimes a community elder, sometimes a hostile policy panel, sometimes a hesitant SME. The Bloom level is Apply because the same reasoning must be re-cast across registers.

DEBRIEF — reflect on consequence

The strongest counter-position from PROBE returns, generated by the AI. The learner refines, refutes, or revises. Genuine revision scores higher than restatement. The DEBRIEF result drives the mission composite that awards the SDG Keystone.

Coach to the stage, not the Bloom level

A teacher walking between teams during a mission should coach to the stage in front of them. Some recipes for stage-specific intervention:

IF YOU SEE...	TRY THIS PROMPT
BRIEF · team summarising not analysing	"Whose interests does this pit against whose? Say it in one sentence."
PROBE · team treating all sources as equal	"Which source has the most to lose from each version of the answer?"
DECIDE · team overclaiming	"What's the strongest case against what you just committed to?"
ACT · communication too generic	"Read your draft as if you were the audience. What would you push back on?"
DEBRIEF · team capitulating to the counter	"You don't have to abandon the position – refine it. What did the counter get right?"

AI-enhanced features

ฟีเจอร์ที่ขับเคลื่อนด้วย AI

Dr. Payungsak Kaenchan | Faculty of Liberal Arts, Mahidol University
Creative Commons BY-NC · Educational, non-commercial use only · No profit · Reuse or duplication must credit the author and obtain prior consent.

Five named features make the AI side of the platform visible and auditable. Each is bounded by the AI-TPACK rule – AI handles scale and consistency; humans handle authority and cultural judgment.

Mr Compass · the Socratic Field Mentor

Mr Compass is the in-app Field Mentor – a Socratic companion, **not** a content tutor. Without strict guardrails this kind of chatbot would undermine the entire pedagogical architecture. The system prompt is engineered to:

- Ask reflective questions that promote team discussion.
- Provide language support only (vocabulary, grammar, register).
- Offer encouragement and emotional support.
- Suggest which team role might address a question.
- Model professional English.

Mr Compass **cannot** give content answers, evaluate decisions, reveal earned-only information, predict consequences, or resolve ethical dilemmas. When asked for any of those, it redirects: "That's something your team needs to work through together. What does your Ethics Officer think?"

Mr Compass conversation panel Three-message exchange: a learner asks for the answer; Mr Compass redirects to the team's Ethics Officer; learner reformulates as a language question; Mr Compass coaches a register shift.

futureproof-sdgs-lab.netlify.app/mission/compass · capture date TBD

Quota Mr Compass enforces ~10 messages per mission per learner. Unlimited use would degrade productive struggle. Language support is always free; strategic questions cost Insight Tokens (Expert Consultant, 15 tokens).

AI Judges · three formative evaluators

Each decision a learner submits during a mission is scored by three AI Judges working from the Rubric B system prompt. The Judges score per stage, per

criterion, with **1 • 3 • 5** bands. Every return must include a specific, actionable growthEdge – a null fails validation and the call retries.

The three Judges differ slightly in instruction-following: one is calibrated stricter on factual grounding, one on language quality, one on ethical reasoning. The engine composes the mission pass-threshold from their combined output. Teacher audit on random-sample basis triggers prompt revision if drift exceeds 0.5 score-points.

AI Judge response card · Final Task screen Three Judge avatars with each Judge's score across the five stages, the composite score, the token delta, and the mandatory growthEdge – a specific actionable next step.

futureproof-sdgs-lab.netlify.app/final-task · capture date TBD

Insight Tokens · the spendable process reward

Insight Tokens are awarded for in-mission decisions and spent on scaffolding tools. Critically, **tokens cannot buy a Keystone** – that separation protects the productive struggle. Tokens spend on:

TOOL	COST	EFFECT
Expert Consultant	15 ♦	One strategic AI question per mission
Language Coach Session	10 ♦	Detailed AI feedback on a draft
Hint Reveal	5 ♦	Unlock one hidden data point
Decision Replay	25 ♦	Redo one decision point
Pronunciation Drill	10 ♦	AI-guided pronunciation practice
Premium Studio Template	20 ♦	Upgraded Voice for Change layout

Voice for Change Studio · the capstone

See Chapter 9 for the full treatment.

Hall of Voices · the Community of Practice

A public gallery of curated capstones, governed by explicit, withdrawable consent. Designed in the Lave & Wenger Community-of-Practice tradition: learners enter as peripheral participants (viewing others' work) and graduate to full participants (their own work featured). Curation respects PDPA at every step – withdrawal of consent removes the work within 7 days.

The Voice for Change capstone

ภารกิจปิดท้าย Voice for Change

Having walked all six frontlines, the learner proposes one concrete action to a real Thai audience. The capstone is multimodal, the audience is real, and the grader is human.

The prompt

The Voice for Change prompt is constant across all learners:

Having walked all six frontlines, propose one concrete action for a Thai community – addressed to a real audience, not the teacher.

Three submission lanes (CAST UDL)

CAST UDL Guideline 5 (Multiple Means of Action and Expression) is implemented as three submission lanes. The lane is a means of expression – **it never changes the bar:**

- Record live – in-browser, 60-180 s, unlimited re-record.
- Upload – a prepared audio or short video file.
- Create with Canva – opens a template in a new tab (never embedded), exported and re-uploaded.

Voice for Change Studio · lane selector Three large lane cards (Record / Upload / Canva); a hover state explains each. Below: the unchanging prompt, and the five reusable evidence commitments carried from each mission's DEBRIEF.

futureproof-sdgs-lab.netlify.app/final-task · capture date TBD

Why the audience matters

The address is to the audience, not the teacher. A learner addressing the Khlong Toey community leaders writes differently than one addressing the Department of City Planning. Audience adaptation is part of what Rubric A scores under Critical & Ethical Reasoning and Craft of the Chosen Medium.

The evidence commitment

At each mission's DEBRIEF the learner commits to a specific piece of evidence they will carry into the capstone. The Voice for Change either **uses** that evidence or argues explicitly why it no longer holds. Rubric A's Dimension 4 (Synthesis & Evidence Commitment) scores this.

The teacher grades, not the AI

By design, Voice for Change is the one place AI does not score. This is the AI-TPACK boundary made operational: every formative mission was AI-scaffolded for consistency; the summative grade – the one that goes on the transcript – stays human.

For the judge If you take one architectural commitment away from this manual, take this one. The AI scales the journey; the human authorises the verdict. Removing this commitment would not save engineering time – it would unmake the platform.

Teacher console & grading workflow

Dr. Payungsak Kaenchan | Faculty of Liberal Arts, Mahidol University
Creative Commons BY-NC · Educational, non-commercial use only · No profit · Reuse or duplication must credit the author and obtain prior consent.

The Admin Command Platform has seven modules. Three you'll touch every week (User Management, Analytics, Moderation); four you'll touch occasionally.

Seven modules

MODULE	FREQUENCY	WHAT YOU'LL DO
User Management	Weekly	Onboard a class, manage teams, reset password, process deletion request.
Analytics Dashboard	Weekly	Engagement, mission completion, CEFR delta, soft-skills heatmap, decision-pattern analysis.
Moderation	Weekly	Review flagged AI judgments, replay against rubric, override if warranted.
Mission Architect	Per term	Add or edit scenarios for special cohorts. Risky during a live cohort – preview required.
PDPA Center	Per term	Consent audit, data-subject access requests, audit log review.
System Configuration	Per term	Model selection, difficulty parameters, feature flags.
Hall of Voices Curator	End of term	Review consenting submissions and feature the strongest publicly.

Admin Dashboard · home Top stat tiles: active learners, missions cleared this week, AI Judge load, Hall of Voices submissions pending review. Left sidebar: the seven modules.

futureproof-sdgs-lab.netlify.app/admin · capture date TBD

Grading the Voice for Change with Rubric A

Rubric A is the rubric your transcript grade depends on. The workflow:

- Open the submission in Admin → Hall of Voices Curator → Pending.
- Play the submission once end-to-end without scoring. Form an impression.
- Score the five dimensions in the embedded scoring panel: Language Proficiency · Critical & Ethical Reasoning · Craft · Synthesis & Evidence Commitment · AI Collaboration Ethics.
- Add a one-paragraph qualitative comment.
- Save. The dashboard computes the composite and applies suggested band thresholds (38–45 A; 30–37 B; 22–29 C; ≤21 R&R).
- Decide independently of the AI Judges. Their scores are advisory.

Suggested grade weighting

Voice for Change · Rubric A

50%

Language growth · Rubric C

20%

Soft skills · Rubric D

20%

Mission decision aggregate · Rubric B audit

10%

You may re-weight on your syllabus. The Keystones are a gate, not a grade – earning six unlocks the capstone; they are never averaged in.

Auditing AI Judge scores

Random-sample 5% of AI Judge decisions across each cohort. Open the decision in Moderation, read the rubric criterion the AI scored against, and compare to what you would have scored. If you disagree, flag the decision; a daily report

aggregates flags. Drift > 0.5 score-points on any criterion triggers a system-prompt revision in the next platform release.

Rubrics A · B · C · D at a glance

สรุปครบทุก A · B · C · D

Four rubrics. Each has its own dedicated PDF in the submission package. This chapter is the at-a-glance reference card – read alongside the PDFs, not in place of them.

The four-tier judging system

FUTUREPROOF uses a four-tier hybrid judging architecture. Each tier has a specific job; together they cover formative scale, peer metacognition, summative authority, and authentic audience.

TIER	JUDGE	JOB	RUBRIC	WHEN
Tier 1	AI Judges	Real-time formative evaluation	B	Every decision
Tier 2	Peer Judges	Cross-team rubric review	D	After a passed mission
Tier 3	Teacher Judges	Holistic, summative, authoritative	A · C · D	Final capstone grading
Tier 4	External Judges	Authentic audience recognition	–	Pitch Showcase event

Rubric reference

Rubric A

Voice for Change – Holistic Evaluation. Teacher-graded summative. Five dimensions × 1.0/0.5 weighting · max 45 points · band thresholds 38/30/22.

Rubric B

Mission Decision Quality – AI Judge Logic. AI-graded formative. Five stages × 1·3·5 per criterion · Insight Token band –10 ... +25 · composite passes Keystone gate.

Rubric C

CEFR-Aligned Language Development (Pre/Post). Course-level. Five dimensions × CEFR half-band increments · composite growth ≥ 4 half-bands is the design target · tier-fairness rule applied.

Rubric D

Soft Skills Demonstration. Teacher + peer. Five dimensions × 1·4·6 · max 30 · culturally-blind descriptors · "insufficient evidence" allowed.

Cross-reference The four standalone Rubric PDFs are in the submission package as rubric-a-voice-for-change.pdf, rubric-b-mission-decision.pdf, rubric-c-cefr-language.pdf, rubric-d-soft-skills.pdf. Each carries a Purpose · Objectives · Audience · Pedagogical Anchors cover page and the full criterion tables.

PDPA + UDL compliance

การปฏิบัติตาม PDPA และ UDL

Two compliance regimes are built into the platform's foundations, not retrofitted. Each contributes architecture, not policy paperwork.

PDPA · Thailand's Personal Data Protection Act

- Bilingual consent at sign-up – Thai + English, granular flags (basic profile · photo · voice · decisions · public showcase).
- Hard-gated readiness check – the diagnostic does not run and writes nothing until consent is recorded.

- My Data screen – every learner can export, correct, or delete their data at any time, self-service.
- 90-day auto-deletion – personal data tombstones after 90 days post-course; pseudonymized analytics survive for research.
- Audit logs – every admin access to personal data is logged with admin ID, timestamp, and reason.
- Encryption – in transit (TLS 1.3) and at rest (Firebase default encryption).
- DPIA – full Data Protection Impact Assessment is part of the submission package (docs/dpia.md).

UDL · CAST Universal Design for Learning 3.0

UDL is implemented across the three CAST principles:

PRINCIPLE	IMPLEMENTATION IN FUTUREPROOF
Multiple Means of Engagement	Six SDG choice points · token economy · Hall of Voices public recognition · learner-paced missions.
Multiple Means of Representation	CEFR-tiered dossiers (3 tiers) · audio + captions · stakeholder dispatch videos · pronunciation speakers on glossed terms · dyslexia-friendly font option.
Multiple Means of Action / Expression	Voice for Change three lanes (live audio · upload · Canva) · Cognitive Pace Mode that removes time pressure · keyboard navigation · screen-reader ARIA labels.

Mobile-first All breakpoints from 360 px upward. PWA-installable. Touch-optimised. Tested on actual mobile devices, not just desktop browser tools.

Frequently asked questions

For teachers

Can I run with fewer than 6 missions?

Yes. The capstone unlock requires 6 Keystones, but a teacher override (logged, audited) can grant a Keystone for assessed offline work. Three missions + three offline-equivalents is supported.

A learner can't finish a mission. What do I do?

First option: have them replay DECIDE / ACT (Decision Replay costs 25 tokens, or you can grant a free retry). Second option: teacher override to grant the Keystone for offline-equivalent work. No learner is dead-ended.

Do I need to teach the SDG content first?

No. The dossier and stakeholder dispatch videos teach the content as part of the mission. Your role is to coach the reasoning, not the facts.

What if Mr Compass gives a wrong answer?

Mr Compass is designed not to give answers at all. If you see one, flag it in Moderation – the system prompt will be revised.

For judges

How do I verify a theoretical claim?

Every claim in Chapter 4 maps to a named feature. Open the platform, open the feature, and the claim is verifiable in under a minute.

What's the AI-human boundary?

AI handles formative scale (Rubric B, Mr Compass language coaching, dossier tiering). Human handles summative authority (Rubric A capstone grade) and cultural authenticity (scenario vetting). See Chapter 3 §3.2.

Is the platform original?

All scenarios, the 5-stage arc, the four-tier judging architecture, Mr Compass guardrails, and the Hall of Voices are original to FUTUREPROOF. The pedagogical frameworks are cited; their operational application is original.

What's the path to 17 SDGs?

Each additional region requires ~ 80 hours of scenario authoring (dossier × 3 tiers, four dispatch videos, AI Judge prompt tuning). The platform engine generalises; the content is per-region. See SUBMISSION-REPORT-v2.md §expansion.
