C]ASSESSMENT
INSTRUMENT

CEFR-Aligned Language Development (Pre / Post)

รูบริก C · พัฒนาการทางภาษาตามมาตรฐาน CEFR (เปรียบเทียบก่อน/หลัง)

PURPOSE · วัตถุประสงค์

Measure each learner's **delta** — the gain in language proficiency — across the course, in CEFR half-band increments. The unit of evaluation is *growth*, not absolute level. This rubric exists to defend the claim that FUTUREPROOF causes measurable language development, not to rank learners against each other or against native-like norms.

OBJECTIVES · เป้าหมายเฉพาะ

- Establish each learner's CEFR band at three timepoints: **diagnostic**, **mid-journey** (after first passed regional mission), and **post-capstone** (after Voice for Change).
- Score five dimensions consistently at each timepoint: lexical, grammatical, discourse, register, phonological.
- Apply the **tier-fairness rule**: a Tier-1 learner's A2 → B1 half-band gain equals a Tier-3 learner's B2 → B2+ gain.
- Produce a structured growth record per learner suitable for institutional reporting and longitudinal research.
- Calibrate AI evaluator against human-scored audit samples; drift > 0.5 half-band on any dimension triggers prompt revision.

APPLIES TO · ขอบเขตการใช้

A single learner's writing and speaking samples across the course. Reading and listening receptive skills are measured by the diagnostic instrument and by in-platform comprehension; productive samples (writing/speaking) drive band placement.

SCORING SCALE · มาตรารากการให้คะแนน

CEFR bands A2 → C2 with intra-band markers (A2 · B1- · B1 · B1+ · B2- · B2 · B2+ · C1 · C1+ · C2). Growth = post-band – pre-band, in half-band increments. Composite growth ≥ 4 half-bands across the course is the design target.

USED BY · ผู้ใช้รูบริก

Course-level evaluators (the LALA109 teacher, course coordinator, and institutional researchers). This rubric does NOT generate a passing grade; it produces a *development record* that supplements Rubric A's holistic capstone grade.

PEDAGOGICAL ANCHORS · กรอบทฤษฎีที่ใช้

AUTHOR: DR. PAYUNGSAK I

METHODOLOGY · THREE TIMEPOINTS, FIVE DIMENSIONS

DIMENSION	DIAGNOSTIC SOURCE	MID-JOURNEY SOURCE	POST SOURCE
Lexical range	Vocabulary section + writing prompt	DECIDE / ACT written reasoning in first passed mission	Voice for Change + transcript
Grammatical control	Cloze + writing prompt	ACT written communication + DEBRIEF rationale	Voice for Change + transcript
Discourse organization	Writing prompt	PROBE source–weighing + DEBRIEF reflection	Voice for Change synthesis
Register flexibility	Writing prompt (single register)	ACT audience–specific communication	Voice for Change (address to a real audience)
Phonological control	Optional pre–recording	(optional) spoken stage response	Voice for Change audio narration

TIER-FAIRNESS RULE (LOAD-BEARING)

- **Measure growth, not tier.** A Tier-1 learner who moves A2 → B1 has demonstrated the same half-band gain as a Tier-3 learner who moves B2 → B2+. Report the delta, never the absolute band as a verdict on the learner.
- **Receptive vs. productive.** The diagnostic and capstone are productive samples (writing/speaking) and are tier-neutral to produce — grade them directly. Do not infer a ceiling from the learner's reading tier.
- **Listening** is assessed against authentic input with the caption scaffold available; do not down-rate a lower-tier learner for needing the caption — using the provided scaffold is the designed behaviour.

CEFR BAND DESCRIPTORS (FUTUREPROOF WORKING SET)

Lexical Range

A2	Limited stock of frequent words; topic-specific vocabulary is rare.
B1	Sufficient vocabulary to discuss familiar topics; some imprecision.
B1+	Reaches for precise vocabulary in familiar domains; occasionally produces lower-frequency word forms.
B2	Range covers most general topics; circumlocutes around lexical gaps.
C1	Reliable command of low-frequency vocabulary, idiomatic and colloquial usage; chosen with intent.

Grammatical Control

A2	Simple structures; frequent errors in coordination and tense.
B1	Reasonable accuracy in familiar contexts; complex structures attempted but uneven.
B2	Good control of complex grammar; errors do not impede communication.
C1	Consistent grammatical control; errors rare and self-correctable.

Discourse Organization

A2	Linear listing; few connectors.
B1	Linear with simple connectors (and, but, because).
B2	Multiple connectors; clear paragraphing; topic sentences emerging.
C1	Complex argument structures; subordination signals reliable; metadiscourse present.

Register Flexibility

A2	Single register only.
B1	Two recognizable registers (formal / informal) with crossover.
B2	Distinguishes academic / persuasive / colloquial; minor leakage.
C1	Selects register strategically; can blend registers for rhetorical effect.

Phonological Control (Speaking)

A2	Pronunciation transparent enough to be understood with effort.
B1	Generally intelligible; word stress sometimes off.
B2	Generally clear; occasional pronunciation issues with low-frequency words.
C1	Pronunciation contributes to meaning; intonation and stress are tools, not obstacles.

RELIABILITY & CALIBRATION

- **Inter-rater reliability:** Cohen's $\kappa \geq 0.7$ target between two human evaluators on a 10% audit sample.
- **AI evaluator calibration:** tuned against human-scored samples; drift > 0.5 half-band on any dimension triggers prompt revision.
- **Scope discipline:** this rubric explicitly excludes content evaluation — that lives in Rubric A.
