Soft Skills Demonstration

รูบริก D · การแสดงทักษะ Soft Skills ทั้ง ๕ มิติ

PURPOSE · วัตถุประสงค์

Surface and grade the **five soft skills** the platform is designed to cultivate. Unlike a language rubric, this measures *visible behaviour* observable in the decision log and Mr Compass interaction history. It is deliberately blind to native-language background and cultural style; distinguished collaboration looks different in different cultures, and the descriptors describe behaviour, not personality.

OBJECTIVES · เป้าหมายเฉพาะ

- Score each learner on five framework-stable dimensions: **Critical Thinking · Analytical Thinking · Collaboration · Ethical Reasoning · Decision-Making Under Uncertainty**.
- Anchor every score to *specific evidence sources* in the platform — every dimension has a 'where to look' pointer that is auditable.
- Enable Peer Judging (Tier 2) — give peer teams a usable instrument to score each other after a passed regional mission.
- Surface AI / Peer / Self / Teacher score variance on the Admin Dashboard as a *learning signal*, not a calibration target.
- Where evidence is insufficient, allow the teacher to record 'insufficient evidence' rather than a default low score — this is not a penalty.

APPLIES TO · ขอบเขตการใช้

The full Thailand journey — observable through decision logs, Mr Compass interaction history, peer-team observation, and the Voice for Change capstone reflection. Six regional missions provide six observation windows.

SCORING SCALE · มาตรการให้คะแนน

Each dimension scored 1 (Emerging) · 4 (Proficient) · 6 (Distinguished). Maximum: 30 (5 × 6). Bands: 25–30 Distinguished · 18–24 Proficient · 12–17 Developing · ≤ 11 Emerging.

USED BY · ผู้ใช้รูบริก

Teacher Judges (summative reflection at end of course) + Peer Judges (Tier 2, cross-team, after a passed regional mission). Peer scores feed metacognition — they are not summative grades.

PEDAGOGICAL ANCHORS · กรอบทฤษฎีที่ใช้

Hattie Visible Learning (metacognition) · Vygotsky social mediation · Lave & Wenger
Legitimate Peripheral Participation · Bloom · Metacognition · Kohlberg moral development

FACULTY OF LIBERAL ARTS · MAHIDOL UNIVERSITY

AUTHOR: DR. PAYUNGSAK I

1 • CRITICAL THINKING

SCORE	DESCRIPTOR
6 • Distinguished	Routinely tests own reasoning; volunteers counter-examples to own claims; revises position when warranted.
4 • Proficient	Considers counter-examples when prompted; engages with feedback substantively.
1 • Emerging	Treats first reasoning as final reasoning; resists or ignores feedback.

WHERE TO LOOK

DEBRIEF counterargument handling; DECIDE confidence-calibration; Mr Compass interaction history (Socratic, never answers).

2 • ANALYTICAL THINKING

SCORE	DESCRIPTOR
6 • Distinguished	Decomposes problems into multi-axis comparisons; distinguishes signal from noise; weighs evidence with stated criteria.
4 • Proficient	Decomposes problems into recognizable parts; weighs evidence implicitly.
1 • Emerging	Treats problems as unitary; offers conclusions without analytic chain.

WHERE TO LOOK

PROBE source-weighing across the dossier + four stakeholder voices; DECIDE strategy rationale under the regional trade-off.

3 • COLLABORATION

SCORE	DESCRIPTOR
6 • Distinguished	Distinguishes own role from teammates' roles; visibly defers and visibly leads at appropriate moments; surfaces unspoken disagreements.
4 • Proficient	Plays role; contributes consistently; resolves disagreement when surfaced.
1 • Emerging	Either dominates or withdraws; collaboration is performative.

WHERE TO LOOK

Decision-log by Uid distribution; Mr Compass "what does your teammate think?" redirects; role-led contributions across the arc and in the Voice for Change.

4 • ETHICAL REASONING

SCORE	DESCRIPTOR
6 • Distinguished	Articulates ethical stakes proactively; engages with the strongest counterargument; distinguishes ethical claims from preferences.
4 • Proficient	Recognizes ethical stakes when prompted; engages with counterargument with effort.
1 • Emerging	Treats ethics as either obvious or irrelevant.

WHERE TO LOOK

DECIDE / DEBRIEF ethical reasoning on the regional trade-off; the Voice for Change argument; documented AI-collaboration reflection.

5 • DECISION-MAKING UNDER UNCERTAINTY

SCORE	DESCRIPTOR
6 • Distinguished	Commits to a decision with stated trade-offs and reversibility analysis; updates the decision when new evidence demands it.
4 • Proficient	Commits to a decision with stated rationale.
1 • Emerging	Avoids committing; or commits without rationale.

WHERE TO LOOK

DECIDE under the trade-off (incl. the deliberate confidence trap); DEBRIEF revision; the evidence commitment carried into the Voice for Change.

PEER JUDGING (TIER 2) AND VARIANCE AS LEARNING SIGNAL

After a team has passed at least one regional mission, each team scores one peer team using Rubric D on that mission's decision trace. Peer scores feed *metacognition* — they are not summative grades. The Admin Dashboard surfaces the variance between AI • Peer • Self • Teacher scores as a learning signal, not a calibration target. Cultural-style blindness is intentional: distinguished collaboration looks different in different cultural contexts; the descriptors above describe *visible behavior*, not personality.

INSUFFICIENT-EVIDENCE RULE

Where decision logs are insufficient to score a dimension (e.g., a learner exempted from a particular stage), the teacher records "insufficient evidence" rather than defaulting to a low score. This is not a penalty — it is honest accounting.
